Welcome to Illinois Retina & Eye Associates. There are papers enclosed with this letter that we ask you to fill out and bring with you the day of your appointment. Please bring any insurance cards and a current list of your medications with you as well. **Please visit our website [www.illinoisretinaandeyeassociates.com](http://www.illinoisretinaandeyeassociates.com) for general information and educational material on common eye conditions.** The following is some information about our office and how it works.

1. Your eyes may be dilated. This is the only way the doctor can look into the back of the eye. You will need someone to drive you home, and it is always good to have a family member present just in case you or your family has questions.
2. Since dilation is almost always necessary with new patients, your first visit may take a little longer. We make our best efforts to perform all the necessary testing and preferably start treatment including laser during the initial visit if needed. Therefore, depending on the complexity of your case, the first visit may take up to two or three hours.
3. Please avoid a heavy meal prior to your appointment. Some patients may get “sick in their stomach” during certain tests and procedures and it is more likely to occur if you have had a large meal before the test or procedure.
4. Emergencies do occur. If there is a patient with an emergent problem or having a procedure, they may be taken back out of order.
5. We accept patients with or without referrals. In Pekin our services are as follows: comprehensive eye exams, cataract surgery and eyelid surgery. Our services in our Peru, Galesburg and Dixon locations are as follows: diseases of the retina, vitreous and macula, such as diabetic retinopathy, torn and detached retinas, and macular degeneration. In Peoria all of our services are offered.

Thank you for allowing us to help you with your eye care needs. Please call our office with any questions.
